## (54) OUTPUT COMPENSATION CIRCUIT FOR BRIDGE TYPE MEASURING APPARATUS

## (57)Abstract:

PURPOSE: To accomplish better temperature compensation of the output of the measuring apparatus by utilizing the temperature characteristic of the detection element itself in the bridge type measuring apparatus serving as the temperature sensor.

CONSTITUTION: The output voltage of the bridge type measuring apparatus comprising detection elements 1W4 is converted into the output current I2 corresponding to the output voltage with a voltage-current conversion circuit 200. The output current I2 is converted into the voltage signal Vout in a temperature compensation circuit 300. The circuit 200 is provided with resistor 16 (or 16-1) to compensate the temperature characteristic of the voltage Vout of the circuit 300. The current level of the current signal generated from the circuit 200 is adjusted according to the voltage drop in the detection element in the measuring apparatus serving as a temperature sensor thereby accomplishing the temperature compensation of the output characteristic.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]
